

Rasheed Orleans

347-453-2658 | Rasheedorleans@gmail.com | Brooklyn, NY

Summary

Experienced engineer adept at analytical problem-solving, with strong communication and collaboration skills, facilitating seamless outcomes through teamwork. Known for meticulous documentation and demonstrating strong time-management and organizational abilities in dynamic settings.

Experience

Dell Technologies | Remote

Technical Support Engineer | 06/2021 - Present

- Efficiently handle over 20 end-user requests weekly, achieving over
- 1200 ticket resolutions during my tenure, delivering timely troubleshooting and support solutions.
- Lead specialized Data Domain support initiatives, fostering collaboration across cross-functional IT teams.
- Proactively oversee network capacity and performance, swiftly diagnosing and resolving intricate network issues utilizing Wireshark.
- Proficiently documented and communicated technical information in layman's terms to enhance comprehension among non-technical audiences using Slack, Jira, and Microsoft Teams.
- Evaluated system hardware and software, proposing and implementing modifications to minimize lag time and enhance overall speed..
- Led collaboration with the software development team to address reported errors and bugs in newly released software.
- Achieved a perfect customer satisfaction rating based on customer evaluations of my performance, including Bank of America, Disney, and Xerox.

rushorb.com

Web and Cloud development | 01/2025 - Present

- Successfully created and deployed a website hosted in AWS, made locally on a Windows machine through Powershell, built on MD and HTML documents.
- Automated operations by creating scripts to update the website, Github, and AWS
- Successfully deploy and manage AWS services (s3, EC2, CloudFront, route 53, CloudWatch, etc.)
- Integrated Github repositories with Windows devices and AWS.
- Deploy cloud services using AWSCLI and Terraform.

University at Albany, SUNY

Student Capstone Project | 08/2017 - 03/2025

- Pioneered the conception and execution of a cutting-edge sensor system, meticulously engineered to monitor user movements, discerning potential risks, and proactively preventing back injuries.
- Employed ESP32 microcontrollers and accelerometers to detect movements, transmitting data to other sensors and computers via Bluetooth. Integrated haptic feedback for instantaneous alerts, complemented by a Python script to process real-time data, ensuring comprehensive risk detection and response capabilities.

Skills

Windows, PowerShell, Microsoft Office, SMB, AWS cloud, JSON, Cloud computing, Terraform, Virtualization, Security configuration, Threat analysis, SSL, TLS, Scripting, Python, C, Linux, Linux administration, NFS, Network Configuration, TCP/IP, Routing Protocols, DNS, JIRA, Salesforce, SaaS, GitHub

Education

University at Albany - SUNY | Albany

Electrical and Computer Engineering

Certificates

CompTIA Security+, AWS Certified Solutions Architect
